SOUTH DAKOTA AGING DATA

Joyce I. Nelson
and
Dr. James Satterlee

There are more older people in South Dakota than ever before. Many are active and involved in their communities. Others have need for some assistance. Still others require compassionate care.

Communities planning for future economic, religious, political, and health needs of older South Dakotans cannot make informed decisions without knowledge of the numbers and distribution of citizens who are 65 years of age and over.¹ Such information—the numbers and the percent of population—is provided here for the nation, the state, and each county in South Dakota. No attempt has been made to analyze the data.²

The nation's population of those 65 years of age and over has been increasing steadily since the first census in 1790. In 1960, the population 65 and over in the United States was 9%. It grew to 11% in 1980.

The percentages are higher in South Dakota. Those persons 65 and over reached 11% in 1960, 13% in 1980, and are estimated to be 14% of the state's population in 1990. This is one in nine persons in 1960, one in eight in 1970, and one in seven and one half in 1980. An estimated one in seven South Dakotans will be 65 years of age and over in 1990.

¹Choice of age 65 is based upon eligibility for Medicare, as established by Social Security Administration.

²U.S. census of population, PC (1)-B43, 1960, 1970, 1980. South Dakota general population characteristics

In 1980, the population 65 and over constituted over 20% of the population in Hutchinson, Kingsbury, and Miner counties. Less than 8% of the 1980 population was 65 and over in Buffalo, Shannon, Todd, and Ziebach. The percent of population 65 and over increased from 1960 to 1980 in all counties except Buffalo, Clay, Fall River, Jackson,³ Lincoln, Meade, Shannon, Union, and Ziebach.

One of the more dramatic features of the data is the percent of the population 85 and over. This portion of the South Dakota population is increasing more rapidly than that of the nation. In 1960 6% of South Dakotans 65 and over were 85 or over; this figure reached 11% in 1980. In the year 2000 an estimated 17% of the population 65 and over will be 85 and older.

A distinctive trend has also appeared in the male-female distribution within this population group. In South Dakota the male-female percentage in the 85 and older age group was 45% male and 55% female in 1960, 33% male and 67% female in 1980, and will be an estimated 26% male and 74% female in the year 2000.

The following abbreviations are used in the tables and charts:

TOT POP	: total population
65=>	: 65 years of age and older
M 65 =>	: males 65 years of age and over
F 65 =>	: females 65 years of age and over
85 =>	: 85 years of age and older
%	: percent of population (as designated)
%85=>of65=>	: percent of population 65 and over that is 85 and over

Census Data Center: The Census Data Center, located in the Department of Rural Sociology at SDSU, was established in 1982 by joint agreement of the State of South Dakota and the U.S. Census Bureau. Its services are free of charge to the South Dakota public with a minimum charge for material costs. A cooperative arrangement with the Agricultural Experiment Station at SDSU provides personnel service and support for research and dissemination of data.
