Lawn Weed Control

Mike Moechnig, Extension Weed Specialist
Darrell Deneke, Extension IPM Coordinator
Shane Andersen, Research Associate - Turfgrass

Perennial weeds
- Quackgrass
- Smooth bromegrass
- Creeping bellflower
- Ground ivy
- Dandelion
- Field bindweed
- Wild violet
- Canada thistle

Annual weeds
- Crabgrass
- Yellow foxtail
- Prostrate knotweed
- Chickweed
- Prostrate spurge
- Yellow woodsorrel (oxalis)
- Broadleaf plantain
- Puncturevine

South Dakota Cooperative Extension Service

Issued in furtherance of Cooperative Extension work, Acts of May 8 and June 30, 1914, in cooperation with the USDA. Larry Tidemann, Director of Extension, Associate Dean, College of Agriculture & Biological Sciences, South Dakota State University, Brookings. SDSU is an Affirmative Action/Equal Opportunity Employer (Male/Female) and offers all benefits, services, and educational and employment opportunities without regard for ancestry, age, race, citizenship, color, creed, religion, gender, disability, national origin, sexual preference, or Vietnam Era veteran status.

5,000 copies of FS 525Y were printed by CES at a cost of $??? each. August 2007.
CULTURAL WEED CONTROL

Cultural weed control practices must be included in weed management programs to optimize control and inhibit re-infestation. A healthy, dense turf cover is the best overall defense against weed invasion. Some common cultural weed control practices include planting the most adapted turfgrass species for your environment (i.e. shade, full sun, or hot, dry conditions), maintaining a mowing height of 2.5 – 3.5 inches, watering deeply but less frequently, and proper soil maintenance including fertilization and core aerification.

HERBICIDE APPLICATION

**Annual grasses:** For controlling annual grasses like crabgrass or foxtail, apply crabgrass preventers prior to expected weed seed germination. These herbicides may be found in weed-and-feed products or clay-based granules and should be applied in late April or early May. Control escapes with an herbicide that contains quinclorac or methanearsonate (see below).

**Annual broadleaf weeds:** Many broadleaf herbicides contain dicamba, which may be taken up by tree roots if excessive rates or repeat applications are made over the tree root zone (generally 2 times the diameter of the tree crown). Broadleaf herbicides containing 2,4-D or dicamba may volatilize and the vapors may be blown to trees or garden/ornamental plants resulting in plant injury. To minimize the risk of volatilization, apply these herbicides when temperatures are less than 85°F and there is only a light breeze. Warm season turfgrasses such as buffalograss may be injured by 2,4-D if applied during hot weather (greater than 80°F).

**Perennial weeds:** For perennial broadleaf weeds, apply herbicides in the fall following the first light frost. Repeat herbicide applications 10 – 15 days later if necessary for difficult perennial weeds such as ground ivy or field bindweed. For perennial grasses, dig plants or spot spray base of weed with a non-selective herbicide like glyphosate (Roundup).

Always follow label directions. More information may be found at [http://plantsci.sdstate.edu/weeds/](http://plantsci.sdstate.edu/weeds/)

1Trade names that may include each herbicide: Combination products that may include 2,4-D+dicamba+MCPP (Weed-B-Gone Max, Bayer Advanced, Trimec, Weed Stop, and others), triclopyr (Weed-B-Gone Clover, Chickweed, and Oxalis Killer, Turflon), quinclorac (Drive, Weed-B-Gone Max Plus Crabgrass Control, Bayer Advanced Lawn Weed and Crabgrass Killer), methanearsonates such as MSMA or CaMA (Weed-B-Gone Crabgrass Killer, Bayer Advanced Weed Killer for Lawns), crabgrass preventers (Dimension, Scotts Halts, Tupersan, Pendulum, Team, and several other products that may include pendimethalin, dithiopyr, siduron, trifluralin, benefin, DCPA, or bensulide; apply these herbicides in spring prior to weed emergence).

2 Glyphosate (Roundup) is a non-selective herbicide that will kill turfgrass. For spot application only.
