This Other is brought to you for free and open access by the SDSU Extension at Open PRAIRIE: Open Public Research Access Institutional Repository and Information Exchange. It has been accepted for inclusion in SDSU Extension Special Series by an authorized administrator of Open PRAIRIE: Open Public Research Access Institutional Repository and Information Exchange. For more information, please contact michael.biondo@sdstate.edu.
PREVENTING CONTAMINATION OF FOOD

Don’t cross-contaminate. Keep raw meat, poultry, fish, and their juices away from other food.

PREVENT CROSS-CONTAMINATION:

• Always wash hands before and after handling food.
• After cutting raw meats, wash hands, cutting board, knife, and counter tops with hot, soapy water.
• Marinate meat and poultry in a covered dish in the cooler.
• Avoid bare hand contact with foods that are ready-to-eat*. Use utensils, deli tissue, spatulas, tongs, single-use gloves, or dispensing equipment.
• Use a utensil (spoon or fork) only once to taste food that is to be sold or served.
• Never store food or packages directly on the floor.
• Keep wiping cloth for food contact surfaces and tabletops in sanitizer bucket when it is not being used for wiping.
• Cloths used for wiping up raw animal juices must be kept separate from cloths used for other purposes.

* Ready-to-eat foods are foods that require no further preparation or cooking before serving (e.g., relish trays and birthday cakes).

DIGGING DEEPER—PREVENTING CONTAMINATION OF FOOD

Refer to the scenario “Monday Chaos” for questions 1 through 4:

1) When Sam entered the kitchen to help, what precautions should he take to avoid contamination of food?
   a) Put on an apron.
   b) Wash his hands.
   c) Put the wiping cloth in the sanitizing bucket.
   d) All of the above.

2) What should be done with the relish tray?
   a) Cook the items, so any bacteria that would have gotten on them would be destroyed.
   b) Throw the items away.
   c) Wash the items thoroughly under running water.
   d) Wash the items with a very weak solution of chlorine bleach.

3) Where should the raw ground-beef patties be stored in the cooler?
   a) next to the relish tray
   b) on the floor, so they cannot drip on anything
   c) on the bottom shelf (above poultry)
   d) close to the door for easy access

4) Which of the following is NOT an example of cross-contamination?
   a) Refilling your beverage container after placing a chicken breast on the grill while wearing gloves.
   b) Cracking eggs in a large bowl for an egg bake, then immediately removing hot rolls from the oven.
   c) Sweeping the floor, then assisting another employee in putting an order together with French fries, pops, and cheeseburgers.
   d) Using tongs to place donuts on a serving tray.
