# THE AGE AND SEX STRUCTURE OF THE POPULATION OF SOUTH DAKOTA, 1960 AND 1970

by

Marvin P. Riley, Bruce G. Breamer and Eugene T. Butler\*

## INTRODUCTION

This bulletin is a response to the numerous requests for information on the age and sex composition of South Dakota's population. As local leaders and citizens grapple with the complex problems facing their communities today they need to know more than the total number of people in their area. They need to know the number of males and females in each age group. A knowledge of the age-sex composition of the population and how it is changing is essential to deal effectively with the complex issues of taxation, school enrollment, pollution, health, welfare and medical services. It is precisely with these needs in mind that the authors designed the present bulletin -- its main purpose being to make age and sex composition information on South Dakota's population available in a readily useable form.

## ORGANIZATION OF THE BULLETIN

In order to provide as much factual data as possible and to permit comparisons between populations, the age and sex information for the census years of 1960 and 1970 is presented for the following political units: United States, North Central Region, West North Central Division, State of South Dakota, State Planning Districts, South Dakota Counties, and South Dakota Urban Places. Age and sex data for each of the above mentioned political units for the years 1960 and 1970

is presented in three forms. These are:

1. An "age-sex pyramid" - a graphic representation of the age-sex distribution of the population.
2. A "data table" - a table which presents the official United States census count of the population by age and by sex.
3. Population Ratios and Indexes - eight summary measures of the relationships between various segments of the population. These are defined below.

## DEFINITIONS

North Central Region. Data on the North Central Region includes:

1. North Central Region: Data based on the total population of the states of North Dakota, South Dakota, Nebraska, Kansas, Missouri, Iowa, Minnesota, Wisconsin, Illinois, Indiana, Ohio and Michigan.

---

\*Professor of Rural Sociology and Project Leader, and Graduate Research Assistants, respectively. The authors wish to acknowledge the assistance of students Jennifer Malsam and Connie Veldkamp.

2. West North Central Division: Data based on the total population of the states of North Dakota, South Dakota, Nebraska, Kansas, Missouri, Iowa and Minnesota.

#### Age-Sex Pyramid

A graphic representation of the age and sex distribution of the population for a given political unit in the form of a special type bar graph. The pyramid is divided on its horizontal axis into bars, each bar being based on the proportion each five year age category is of the total population. On its vertical axis each age bar of the pyramid is divided into the proportion of males and females. Thus, the bottom bar of the age-sex pyramid will show the percent the male children under five years of age is of the total population and the percent female children under five years of age is of the total population.

#### Data Tables

These tables contain the basic data for the age and sex pyramid. They present the count of the number of inhabitants for the given political unit by five year age categories for males and females. The information for these tables was obtained from the following United States Census Reports:

1. United States Census of Population, 1960, South Dakota: General Population Characteristics. PC (1) 43B, S.D., U.S. Dept. of Commerce.
2. United States Census of Population, 1960, General Population Characteristics. PC (1) 1B, U.S., U.S. Dept. of Commerce.

3. United States Census of Population, 1970, South Dakota: General Population Characteristics. PC (1) B43, S.D., U.S. Dept. of Commerce.
4. United States Census of Population, 1970, United States Summary: General Population Characteristics. PC B1, U.S. Summary, U.S. Dept. of Commerce.

#### Population Ratios and Indexes

1. General Dependency Ratio: The basis for the dependency ratio is the idea that certain age groups in the population are generally productive and other age groups are generally dependent upon the efforts of the productive group. Of course, the term "dependent" will always be somewhat arbitrary and there will be exceptions. Nevertheless, it has become customary to refer to the population under 15 and over 65 years of age as the dependent population and the population 15 through 64 years as the productive population. The formula for the ratio is:

General Dependency Ratio =

$$\frac{\text{Persons under 15 yrs} + \text{Persons 65 yrs \& Over}}{\text{Persons 15 to 65 Years}} \times 100$$

2. Youth Dependency Ratio: This is a more refined measure of dependent population in that it breaks the child population out of the total dependent population and treats the child population separately in relation to the productive population. The formula for this ratio is:

Youth Dependency Ratio =

$$\frac{\text{Persons under 15 Years}}{\text{Persons 15 to 65 Years}} \times 100$$

3. Aged Dependency Ratio: This is a more refined measure of dependency showing the relation of the aged dependent population to the productive population. The formula for this ratio is:

Aged Dependency Ratio =

$$\frac{\text{Persons 65 Years and Over}}{\text{Persons 15 to 65 Years}} \times 100$$

4. Index of Aging: This index relates the two segments of the dependent population (the children and the aged) to each other. When the index figure is compared with other years, it provides a single measure of the extent to which a population is aging. The formula for this index is

Index of Aging =

$$\frac{\text{Persons 65 Years and Over}}{\text{Persons Under 15 Years}} \times 100$$

5. Sex Ratio: The simplest measure of population structure is the "sex ratio" which is defined as the number of males per 100 females. The formula for this ratio is:

Sex Ratio =

$$\frac{\text{Number of Males}}{\text{Number of Females}} \times 100$$

6. Fertility Ratio: Often termed the "child-woman ratio", this measure of the fertility of a population is derived entirely from census data and is based on the number of children under five years per 1,000 women child-bearing age (15 to 45 years of age). The formula is:

Fertility Ratio =

$$\frac{\text{Children Under 5 Years of Age}}{\text{Number of Women Ages 15 to 45}} \times 1000$$

7. Young Adult Ratio: This measure focuses attention on the younger adult segment of the population. This ratio relates the age group containing the "potential" parents and those persons in the early stages of the family building process to the remainder of the population. The formula for this ratio is:

Young Adult Ratio =

$$\frac{\text{Persons 15 to 35 Years}}{\text{Persons Under 15 Yrs + Persons 35 Yrs & Over}} \times 100$$

8. Median Age: The most useful single figure summarizing a population's age structure is its median age; a form of "average", which divides the population into two equal parts half older and half younger. The median age of South Dakota's population in 1970 was 27.4 years. This figure tells us that one-half of the population was older and one-half of the population was younger than the age of 27 years.

## LIMITATION OF THE DATA

### Tabulation Error

The actual population count for South Dakota is 666,257, which is different from the figure of 665,507 used in this publication. The difference is due to errors found after completion of census tabulation for Hamlin and Meade Counties. The errors for these two counties were not corrected for the age and sex data; therefore, the information for Hamlin County is under-reported by 348 and Meade County is under-reported by 402 persons. The following table presents the census error:

	1970 POPULATION <sup>1</sup>	
	<u>As shown in</u> <u>the tables</u>	<u>Corrected</u>
Ellsworth (U) . . . . .	5,805	6,207
Hamlin County . . . . .	5,172	5,520
Estelline City. . . . .	276	624
Meade County. . . . .	16,618	17,020
Unorganized Territory of Blackhawk-Piedmont. . . . .	8,954	9,356

### Rounding Error

Percentages found in the data tables are computed on the basis of the total population of the area. Rounding procedure for tabular convenience results in percentage totals not always adding to an exact 100.0%.

<sup>1</sup> U.S. Bureau of Census, "General Population Characteristics", 1970 Census of Population. Washington, D.C.: U.S. Department of Commerce, August 1971, PC (1) B43, p. 42.

### Error in South Dakota 1970 Farm and Nonfarm Population Figures

On May 10, 1972 the U.S. Census announced an error in the published report of South Dakota's 1970 total Farm and Nonfarm population. The corrected total Nonfarm population is 206,147 (3,677 more than given in the published report). The corrected total Farm population is 162,730 (3,677 less than in the published report). These corrected figures do not appear in the data tables in this bulletin for the 1970 Farm and Nonfarm population.
